RESEARCH INTERESTS

Collaborative Autonomous Systems, Cyber-physical Systems, Systems for ML, Edge ML, 3D Sensing, Cooperative Perception, Mapping and Localization, Mobile Computing, Wireless Networking.

APPOINTMENTS

Stanford University, *Stanford, CA, USA* *2021∼ pres.*

Postdoctoral Scholar, Department of Electrical Engineering

Waymo, *Mountain View, CA, USA* *summer 2021*

Intern, Perception

Microsoft Research, *Redmond, WA, USA* *2017∼ 2019*

Research Intern, Contractor, Mobility and Networking Group

IBM Research, *Yorktown Heights, NY, USA* *summer 2015*

Research Intern, T.J. Watson Research Center

EDUCATION

Ph.D. | *Electrical and Computer Engineering* *2020*

University of Southern California, Los Angeles, USA

Dissertation: Networked Cooperative Perception: Towards Robust and Efficient Autonomous Driving

M.S. | *Computer Science* *2020*

University of Southern California, Los Angeles, USA

B.S. | *Electronic Engineering* *2013*

Shanghai Jiao Tong University, Shanghai, China

Thesis: Distributed Channel-Assignment and Throughput Control in Multi-Radio Multi-Channel Wireless Network

PROFESSIONAL EXPERIENCE

Stanford University, *Postdoctoral Scholar* *Stanford, CA, 2021∼pres.*

- Designed edge ML monitoring and debugging system, ML-EXray, a programming framework for end-to-end ML deployment validation to enable verifiable ML on edge devices.
- Collaborated with Google and Meta to uncover deployment issues in industry edge ML production pipelines.

General Motors R&D, *Collaborator* *Warren, MI, 2013∼pres.*

- Designed Augmented Vehicular Reality (AVR), a collaborative sensing system which enabled live extended 3D vision beyond occlusion and range for better autonomous driving decisions. [Featured in GetMobile Magazine]

- Built a lightweight self-healing HDMap system, Carmap, which enabled real-time 3D map difference updates, and invented a robust simultaneous localization and mapping (SLAM) approach leveraging map differences.
- Designed scalable cooperative perception system (AutoCast) that coordinates and schedules sensor sharing among clusters of vehicles, enabling live extended 3D vision for dense traffic scenarios.
- Invented cooperative autonomous driving model, Coopernaut, which encodes voxelized point cloud into compact representation using Point Transformer for bandwidth efficient sharing and more informed driving.

Waymo LLC., *Perception Intern* *Mountain View, CA, Summer 2021*

- Developed a deep learning network for segmentation problems using LIDAR point clouds (details confidential).

Microsoft Research, *Collaborator, Research Intern* *Redmond, WA, 2017∼2019*

- Developed automated crowdsourcing platform, Satyam, for machine vision groundtruth collection at scale.
- Designed annotation quality control framework for complex vision tasks such as detection, tracking, and segmentation to produce high quality labels in face of untrained workers, human errors, and spammers.
- Built world's largest trans-seasonal detection and tracking dataset, FourSeasons, that captures long term seasonal and diurnal variations with traffic surveillance cameras videos spanning over a year.
- Designed active labeling, MCAL, a hybrid human-machine labeling framework, to reduce the annotation cost using machine labeling while balancing training and labeling cost. [Integrated into Microsoft Azure ML]

IBM Research, *Research Intern* *Yorktown Heights, NY, Summer 2015*

- Devised collaborative video analytics system, Kestrel, that tracks vehicle in a heterogeneous camera network.
- Optimized deep neural network to execute on mobile devices to detect objects, extract features, and resolve path ambiguities by careful association in real-time, reducing mobile energy budget by an order of magnitude.
